(54) PRINT SUBSYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To print data again from the page where trouble occurs by providing a print information setting means, which adds print information to taken-in print data, and a spooler part where print data is stored as a spool file.

SOLUTION: An application program interface library 3 only for print subsystem (PSS) is provided with print information 4a to be added to print data. A spool file 5 where print data is filed is stored in a spooler part 7 of OS standards. A PSS spooler part 11 is a spool area of a PSS main body 9, and a PSS spool file 13 where taken-in print data is filed is stored there. A PSS console 15 takes the PSS spool file 13 of a queue as the object and can change setting of the PSS spool file 13. At the time of print or reprint, print in the unit of pages can be designated, and a form name can be registered to designate a form overlay print.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

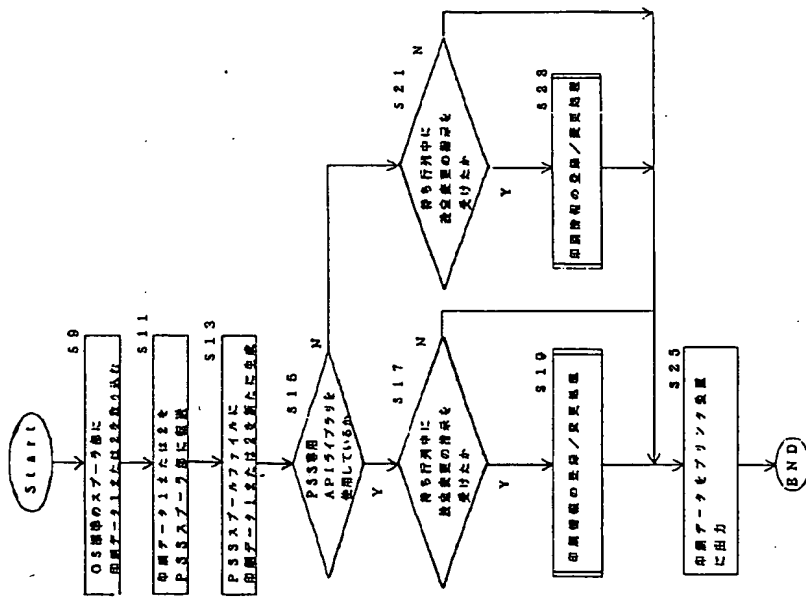

[Date of extinction of right]
